Hi Laura:

Here is a revised statement regarding the NTUA system at Montezuma Creek:

EPA will be paying for water hauling services to deliver water to areas impacted by the discharge. The wells for the NTUA - Montezuma Creek public water system were shut down as a precaution prior to the contaminant plume reaching the area. NTUA will be providing hauled water from the NTUA – Aneth public water system to the Montezuma Creek service area.

The Montezuma Creek system is a groundwater system, but some of the wells are 100 feet from the river, so the wells were closed as a precaution.

Let me know if you have any questions.

Thanks!

Rusty

Drinking Water Intakes Impacted:

- CO = 2
- NM = 5 systems with 9 intakes
- UT = 0 systems
- Navajo Nation = 0 *Note: One Navajo Nation drinking water intake on the San Juan River had already been shut down for unrelated reasons.*

CO populations Served by Impacted Systems

- Durango – approx. 23,000 people
- Glacier Club – approx. 525 people

Both systems are still operational and providing water from storage or other sources as of my last update from CDPHE.
